

# Group 02 // Flooding Chorlton

The existing high street priorities vehicular movement over pedestrian activity, green space and a pleasant environment. By diverting vehicular traffic and connecting Wilbraham road to Manchester's existing canal network, the scheme intends to revitalise Chorlton high street, making it the destination as well as the route. The intervention will encourage more people to use the street, offering local businesses the opportunity to thrive. The canal facilitates a healthier lifestyle, by promoting more active transport methods into the city centre, as well as increasing local biodiversity.
